

DECEMBER 2019 LISTINGS

The HoldRite® #117 Series is the ideal solution for restraining hubless cast iron soil pipes against separation during high thrust conditions. HoldRite #117 Series installs in minutes without on-site cutting, bending, measuring, or modifications needed while providing the ideal professional solution for no-hub DWV joints in potential thrust force situations.

FREE Product Training either one-on-one or in a group setting. This training is offered to anyone interested in learning how to convert make shift methods into engineered solutions with our extensive HoldRite line of products

- Ideal for restraining hubless cast iron soil pipe against separation during high thrust conditions
- Engineered to meet plumbing codes, pipe manufacturers' installation instructions and CISPI installation handbook
- Installs in minutes
- Built with stainless steel, black iron and/or galvanized components
- No special tools required for installation
- No field cutting or modifications required
- All components included in each kit

Marking Services Canada Ltd.

Services Designed to Save You Time and Money

Making labeling a cost-effective part of your business entails managing installation expenses. To help reduce in-place costs, Marking Services offers a special packaging process as part of our take-off service. Our [pack-by service](#) allows installers to quickly and efficiently find the label, marker or tag needed for that specific area, array, row, etc.

This eliminates the time spent sorting through boxes to find the specific label needed, greatly reducing installation time. The color-coded drawing provided during the take-off process is then used as a guide for installers, providing the exact location each label or tag should be placed. This allows for guesswork to be eliminated and ensures your facility is accurately labeled.
